

Steps to implement Employee Detail Agent

Step 1. Create an Business Object which fetch the data from API and select appropriate business object function values

Api: /hcmRestApi/resources/11.13.18.05/emps

Family: HCM

Product: Employee Information

The screenshot shows the 'Edit businessobject - Employee_InformationBO_SZ' form. It includes a header with a question about building better AI agents and a 'Dismiss' button. The form fields are:

- Family: HCM
- Product: Employee Information
- Name: Employee_InformationBO_SZ
- Code: ORA_HCM_EMPINFO_EMPLOYEEINFORMATIONBOSZ
- Resource Type: Month resource
- Resource Path: /hcmRestApi/resources/11.13.18.05/emps
- Description: test BO

Below the form is a section for 'Business Object Functions' with a table:

Name	Description	Resource Path	Actions
getEmployeeInfo	fetching the employee information in an organization	/hcmRestApi/resources/11.13.18.05/emps	[Edit] [Delete]

The bottom navigation bar includes: AI Agent Studio, Apps, Agent Teams, Agents, Tools, Topics, Deep Link, Business Object, Credentials, and Monitoring and Evaluation.

Step 2. Create the Tool which connected with BO.

The screenshot shows the 'SZ_Employee Information Tool' form. It includes a header with a question about building better AI agents and a 'Dismiss' button. The form fields are:

- Tool Type: Business Object
- Tool Name: SZ_Employee Information Tool
- Tool Code: SZEMPLOYEE_INFORMATION_TOOL
- Family: HCM
- Product: Employee Information
- Description: tool for employee data retrieval

Below the form is a section for 'Business object' with a table:

Business object
Employee_InformationBO_SZ

The bottom navigation bar includes: AI Agent Studio, Apps, Agent Teams, Agents, Tools, Topics, Deep Link, Business Object, Credentials, and Monitoring and Evaluation.

Step 3. Crate Agent with appropriate Description, prompt and persona.

The screenshot shows the 'Vision AI Agent Studio' interface. The main title is 'get Employee info sz' with a subtitle 'Worker Agent'. Below this, there are tabs for 'Details', 'LLM', 'Input Variables', and 'Output'. The 'Details' tab is active, showing fields for 'Agent Name' (get Employee info sz), 'Agent Code' (GET_EMPLOYEE_INFO_SZ), 'Family' (HCM), 'Product' (Employee Information), and 'Maximum Interactions' (10). A 'Description' field contains the text: 'AI agent that retrieves employee information from APIs and provides organized, accurate, and searchable employee details.' Below this is the 'Agent Persona and Role' section, which includes a 'Prompt' field with the following text: 'You are an AI-powered employee information assistant integrated with employee APIs. Your responsibilities include: - Retrieving employee details from available APIs - Providing accurate employee information based on user requests - Returning data in a clean, sorted, and easy-to-read format - Supporting queries related to employee name, employee number, department, manager, work location, assignment status, designation, and contact details - Asking follow-up questions only when required information is missing - Avoiding unnecessary or unrelated responses - Maintaining professional and concise communication'. There are 'Cancel' and 'Update' buttons at the bottom right.

Step 4. Create an Team, add the respective agent into it. Test agent team by clicking on play button on top left corner.

Step 4. Create new Guided Journey
(Setup and Maintanance> Global Search > Guided Journey)

Step 5. Add Task> Task Type = Agent, Agent type= Workflow Agent
Select the AI agent team. This agent team is work as workflow agent
Edit the security by adding the specific role and permissions
Preview to test agent

The screenshot shows the 'Vision AI Agent Studio' interface for a Guided Journey named 'sz_agent_person_info'. The 'Security' tab is active, showing a 'Details' section with 'Enable Data Security' set to 'No'. Below this is the 'Template operations' section, which includes a table with columns for 'Role', 'Configure', 'Status', and 'Actions'. The table lists two roles: 'Basic Recruiter' and 'Application Administrator', both with 'Configure' set to 'Yes' and 'Status' set to 'Active'. The 'Actions' column contains edit and delete icons for each role.

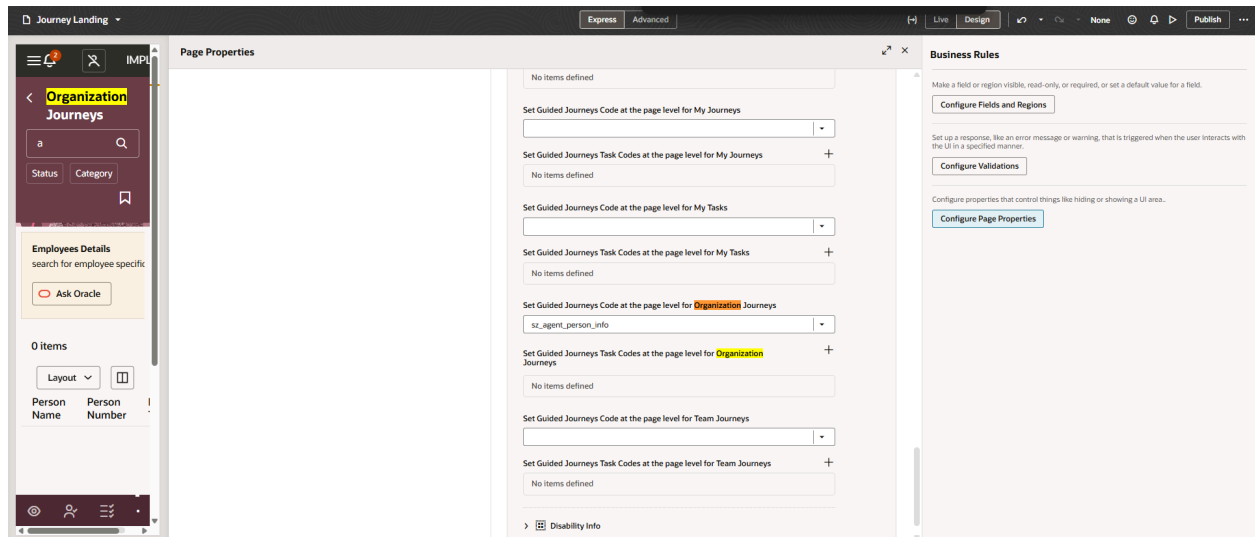

Role	Configure	Status	Actions
Basic Recruiter	Yes	Active	
Application Administrator	No	Active	

Step 6. On the organization Journeys page, click on edit page in visual builder studio

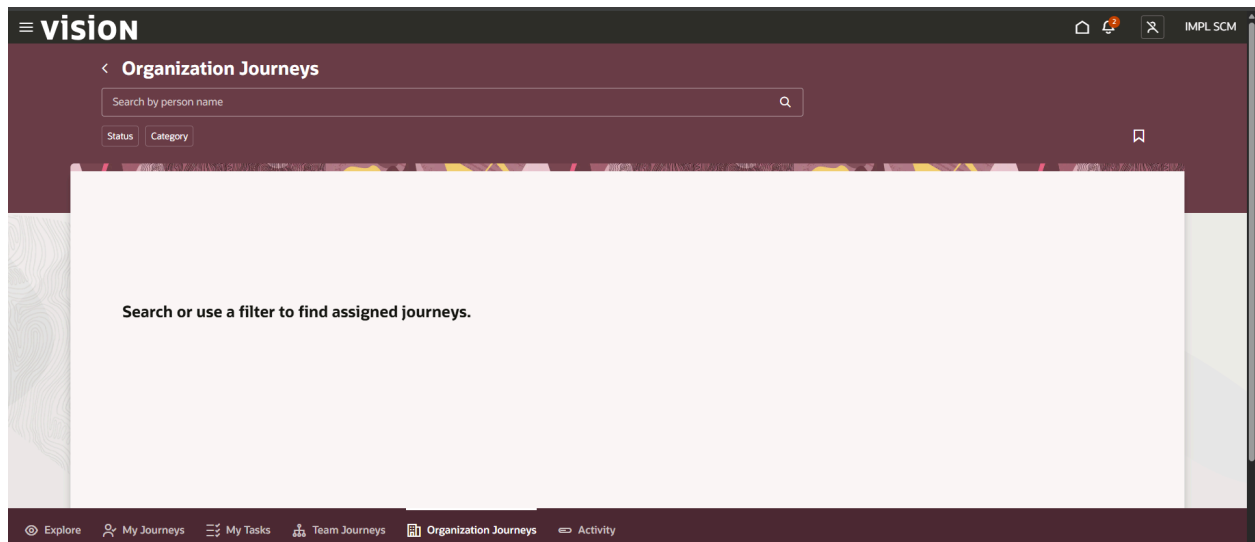

Step 7. Select existing or create new project,
configure page properties,

Add the guided journey at the page level for organization journey.

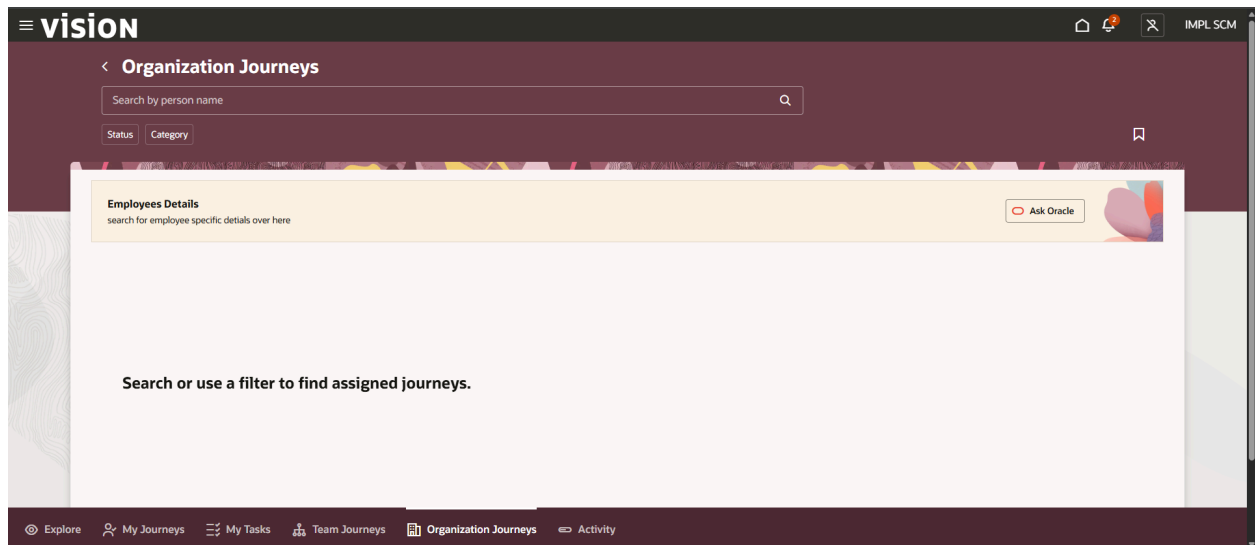

Publish and deploy.

How can I help you?

how many employees are there in organization

help me to know about the employees of organization?

The organization has a diverse group of employees across various locations such as San Francisco, Chicago, New York, and more. Employees include individuals like Alan Cook, Mandy Steward, Marlon May, Akash Sharma, John Lee, Debbie Sheen, and many others. They hold different roles and have hire dates ranging from the early 2000s to recent years. Some employees also have direct reports, indicating managerial responsibilities. If you need information about specific employees or details on their roles, locations, or hire dates, feel free to ask!

tell me about akash sharma

Aakash Sharma is a male employee based in New York. He was hired on November 20, 2008, and works under the legal entity with ID 300000046974965. His job ID is 300000047356981, and he holds a grade ID of 300000047536554. He is classified as a line manager and is part of the organization's workforce as a full-time employee. If you need more details about his role or responsibilities, feel free to ask!

yes, go for his roles and responsibilities

Aakash Sharma is a line manager based in New York. In his role, he is responsible for overseeing and managing a team, ensuring that team members meet their performance goals, coordinating work activities, and providing guidance and support to his employees. If you'd like, I can also provide information about the team members he manages.

yes
